Formula Sheet: Final
Econ 3133
Dr. Keen

$$GDP = C + I + G + (X - IM)$$

National income = Employee compensation + Corporate profits + Proprietors' income + Rental income of persons + Net interest

Net national product = National income + Sales and excise taxes + Business transfers – Net subsidies to government businesses + Statistical discrepancy

Gross national product = Net national product + Depreciation

Gross domestic product = Gross national product – Net factor payments from abroad

Personal income = National income – Contribution for social insurance – Corporate retained earnings + Non-business interest + Transfer payments from government and business

Disposable income = Personal income – Personal income taxes

Government savings = Taxes – Government spending – Transfer payments – Interest on the government debt

Private savings = GDP + Net factor payments from abroad + Transfer payments + Interest on the government debt – Taxes – Consumption

National savings = Private savings + Government savings

Direct foreign investment in the U.S. = – Net exports – Net factor payments from abroad

Investment = Private Savings + Government savings + Direct foreign investment in the U.S.

Adult population = Labor force + Not in the labor force

Labor force = Working + Unemployed

Unemployment rate = (Unemployed/Labor force)×100

Labor force participation rate = (Labor force/Adult population)×100

$$\pi = (P/P_{-1} - 1)\times 100$$

$$(Y - Y^*)/Y^* = -2\times(u - u^*)$$

$$(Y/AP)_n = (Y/AP)\times(1 + G)^n$$

$$\%\Delta Y = \%\Delta A + (2/3)\times\%\Delta N + (1/3)\times\%\Delta K$$

$$Y_d = (1 - t)\times Y$$

$$C = a + b\times Y_d$$

$$I = e - d\times R$$

$$(X - IM) = (g_X - g_{IM}) - (n_X + n_{IM})\times R - m\times Y_d$$

$$M^S = (k\times Y - h\times R)\times P$$

$$\Delta Y = [1/(1 - b\times(1 - t))]\times\Delta I$$
(the same equation holds for a Δa, ΔG, or $\Delta(X - IM)$ on the right hand side)

$$\Delta Y = [1/(1 - (b - m)\times(1 - t))]\times\Delta I$$

(the same equation holds for a Δa, ΔG, or ΔX on the right hand side)

$$\pi = \pi^{e} + f[(Y_{-1} - Y^{*})/Y^{*}]$$

$$C = MPC_{LR}\times Y^{d}$$

$$\Delta C = MPC_{SR}\times\Delta Y^{d}$$

$$A_{+1} = A + R\times A + E - T - C$$

$$Y^{d} = R\times A + E - T$$

$$S = R\times A + E - T - C$$

$$R = r + \pi^{e}$$

$$R_{K} = (R + \delta_{K})\times P_{K}$$

$$R_{K} = (R + \delta_{K})\times P_{K} - (P_{K(+1)} - P_{K})$$

$$I_{K} = K^{*} - K^{*}_{-1} + \delta_{K}\times K^{*}_{-1}$$

$$K^{*} = v\times Y$$

$$I_{K} = v\times(Y - Y_{-1}) + \delta_{K}\times v\times Y_{-1}$$

$$I_{K} = s\times(K^{*} - K_{-1}) + \delta_{K}\times K_{-1}$$

$$R_{K} = [(1 - z)\times(R + \delta_{K})\times P_{K}]/[1 - u]$$

$$R_{H} = (R + \delta_{H})\times P_{H}$$

$$I_{H} = H^{*} - H_{-1} + \delta_{H}\times H_{-1}$$

$$R_{IN} = R\times P_{IN}$$

$$E_{R} = (E\times P)/P_{W}$$

$$E_{R} = q + q_{R}\times R$$

$$(X - IM) = (g_{EX} - g_{EIM}) - (v_{X} + v_{IM})\times E_{R} - m\times Y_{d}$$

Actual deficit = Structural deficit + Cyclical deficit

$$D_{+1} = BD + D$$

CU = Paper money + Coins

TR = Bank deposits held at the Fed + Vault cash

$$M^{B} = CU + TR$$

$$M_{1} = CU + ChD$$

$M_2 = M_1$ + savings accounts + small time deposits (CDs) + money market mutual funds

$$TR = RR + ER$$

$$RR = rr\times ChD$$

$$ER = e \times ChD$$

$$CU = c \times ChD$$

$$M^S = [(1 + c)/(rr + e + c)] \times M^B$$

Total reserves = Borrowed reserves + Nonborrowed reserves

$$OC_M = R - R_M$$

$$M = Y_M/(2 \times z)$$

$$M = ((k \times Y_M)/(2 \times OC_M))^{1/2}$$

$$R = \pi + \beta_\pi \times (\pi - \pi^*) + \beta_Y \times [(Y - Y^*)/Y^*] + r^{e*}$$

$$Y_i = h \times (P_i - P^e) + Y_i^*$$

$$P^e = P^f + b \times (P_i - P^f)$$

$$Y = n \times h \times (1 - b) \times (P - P^f) + Y^*$$

$$W = ½ \times (X + X_{-1})$$

$$X = ½ \times (W + W_{+1}) - (d/2) \times [(U - U^*) + (U_{+1} - U^*)]$$
